Nights:	11 p.m. - 7:30 a.m.	Full Testing	Full Testing	Full Testing

Clifton Springs Hospital Laboratory is under the overall direction of Dr. Enzo Fallone, MD, Laboratory Medical Director. Each laboratory section is under the technical direction and management of a Manager or Supervisor

Hematology offers routine testing with state of the art instrumentation and methodologies. In addition to the complete CBC/Differential and some special hematology tests, hematology also performs routine coagulation, and urinalysis.

Chemistry testing includes general chemistry, therapeutic drug monitoring, endocrinology and blood gas analysis.

The Blood Bank is responsible for the storage and compatibility testing of blood and components and for special immunohematology studies. Products available are red blood cells, plasma, cryoprecipitate and platelets.

The laboratory also offers several on-site microbiology and virology tests including: initial blood culture analysis, C-Diff, CLO testing, and Group A Strep by PCR analysis, along with Influenza A, B, RSV, and SARS Covid-19 via PCR testing.
